

Create a New COSMOS Project

The COSMOS Dashboard makes it really simple to create a new COSMOS Project. In the 'Create new project' section of the Dashboard, enter a name of your project in the 'Name' field.

Once entered, select from the Models listed which of those you would like to be included within your new project. By default, all projects are selected. Once selected click the 'Create' button which will then create the project and take you into the [COSMOS Environment](#).

The screenshot shows the 'Create new project' interface. At the top, there is a 'Name' input field and a 'Create new project' button. Below this is a horizontal line. Underneath the line, there is a 'Revision #4' label. A table of models is displayed with checkboxes and action buttons. The first model is 'Analysis Model', which is selected (checkbox checked) and has a 'Created' button. The second model is 'Change Model', which is also selected (checkbox checked) and has an 'Updated' button. The user 'David Jamieson' is listed as the creator and updater for both models.

Model	Selected	Action	Created/Updated	By
Analysis Model	<input checked="" type="checkbox"/>	Created	Nov 19, 2020 9:41 PM	David Jamieson
Change Model	<input checked="" type="checkbox"/>	Updated	Jan 8, 2021 4:12 PM	David Jamieson
