

Dashboard

Once logged into COSMOS, you are presented with three main areas within the Dashboard.

These are:

Open project: Where a project has been previously created, these will be visible in the list. It is also possible to search for existing projects and also to display all COSMOS projects, or just display those that you have created.

The ability to see 'All' projects depends on the permissions granted to you by the COSMOS administrator. By default, you will not have permission to see any other projects.

Create new project: When needing to create a new COSMOS project, it is possible to do so from this area. Also, specific models that should be included in the project are also selected here.

Import project: In some cases, it might be necessary to import an existing COSMOS project. This might be necessary to move or duplicate an existing project. The imported project can then be updated whilst preserving the original version, for example.
