

Exporting a COSMOS Project

From the COSMOS Toolbar, it is possible to export a COSMOS project in it's entirety. The exported file - in .zip format - can then be transported and [imported](#) into another COSMOS instance

In order to export a project, click the 'Export' button from the COSMOS Toobar. This will immediately download the export to your device.

The default file name of the export will be `cosmos-{name_of_project}.zip`. From here, the export can be [imported](#) to another COSMOS instance, or as a new COSMOS project.

Revision #3
