

# Import a Project from a Backup

In the even that you wish to move or restore a back up a COSMOS project, this is completed using the Import project feature form the Dashboard.

In order to import a project, it is first necessary to [export a current project](#). The ouput of the export is a .zip file.

To import a COSMOS project, drag the exported COSMOS, in .zip format, to the dotted-line box or click in the dotted-line box to open your file browser on your device. Navigate to the COSMOS project - again in .zip format - select 'Open' and then click 'Import'.

The imported project will appear at the bottom of the 'Open project' list.

## Import project

When the project is imported, you will then become the owner of the project.
